App Name: NewMe

App url: <https://newme-frontend-236230481433.us-west1.run.app/>

Purpose: The purpose of this app is to provide users with an easy and intuitive way to visualize different hairstyles and hair colors using AI-powered image manipulation. By combining Google Photos integration, secure OAuth authentication, and Gemini's advanced vision capabilities, the app allows users to experiment with new looks before committing to real-world changes.

Status: Everything is working 🎉

Proposal

<https://github.com/jolenele/social-network-x/wiki/0-%E2%80%90-Proposal>

Deployment

<https://console.cloud.google.com/run/detail/us-west1/newme-frontend/revisions?organizationId=563623475875&project=newme-477700&supportedpurview=project,organizationId,folder>

<https://console.cloud.google.com/run/detail/us-west1/newme-server/revisions?organizationId=563623475875&project=newme-477700&supportedpurview=project,organizationId,folder>

Run Demonstration

- Sign in -> Oauth
- Routes
- Gallery -> Firebase (database)
- Editor -> Vision + Gemini + firestore

show usage - next slide

Google Cloud Console/ Dashboard

Google Cloud run -

<https://console.cloud.google.com/run?organizationId=563623475875&project=newme-477700&supportedpurview=project,organizationId,folder>

Google Cloud data(base) solution

Firebase

- Storage
- Database Entries

<https://console.cloud.google.com/storage/browser?project=newme-477700&supportedpurview=project,organizationId,folder&prefix=&forceOnBucketsSortingFiltering=true&bucketType=live>

Google Cloud Vision Solution

Google Cloud Vision checks the image for a face and ensures the content is safe before sending it to Gemini.

Google Gemini Solution

The heart of the app is Gemini, which performs the actual image manipulation and produces the new hairstyle preview. Google Cloud Vision only performs initial safety and face-detection checks to ensure the image is ready for Gemini.

Google Analytics

<https://github.com/jolenele/social-network-x/blob/main/public/Analytics%20and%20logging%20report.pdf>

- Track page views
- Favorites Saves
- Gemini Requests

Google Cloud Logging

- Used for debugging issues

<https://console.cloud.google.com/run/detail/us-west1/newme-server/observability/logs?organizationId=563623475875&project=newme-477700&supportedpurview=project,organizationId,folder>

Summary

There's still lots we can improve in the app. We learned a ton during this project, especially when working with Google Cloud. Debugging deployment issues was a completely different experience from regular code debugging, and it taught us a lot.

Things to improve:

- Better UI/UX (never satisfied)
- More options for manipulation
- Improve safety
